WC-2210 ERGONOMIC HAND TOOL FOR CLOSED END SPLICES

The WC-2210 Crimping Hand Tool for closed end splices offers exceptional quality and the highest reliability at an affordable price. The handle is ergonomically designed to fit comfortably into users hand while actual crimping action is done in the last bit of handle travel.

The die set has three crimping nests to terminate 22-16, 16-14 and 12-10 closed end splices. The terminal locator insures a complete quality crimp each time. The tool comes with two locators to accommodate both the American and European/Asian styles of closed end splices.

The built-in ratchet insures complete closure of the handles, thus guaranteeing proper cycling of the tool. As the handle of the tool closes, the dies move in a straight line. This straight or in-line action yields the same high quality crimp as a semi-automatic bench press and applicator. For further details, call 800-819-1957.

JUCS-2210 ERGONOMIC HAND TOOL FOR INSULATED TERMINALS AND SPLICES

The JUCS-2210 Crimping Hand Tool for insulated terminals and splices offers exceptional quality at an affordable price for many production requirements.

The handle is ergonomically designed to fit comfortably into users hand while actual crimping action is done in the last bit of handle travel.

The die set has three crimping nests to terminate 22-16 (red), 16-14 (blue) and 12-10 (yellow) pre-insulated terminals and butt splices. The tool provides both a wire barrel and insulation support crimp in one operation.

The terminal locator with wire stop insures a complete quality crimp each time. The locator swings out of the way when crimping butt splices and fully insulated quick disconnects.

The built-in ratchet insures complete closure of the handles, thus guaranteeing proper cycling of the tool. As the handle of the tool closes, the dies move in a straight line. This straight or in-line action yields the same high quality crimp as a semi-automatic bench press and applicator. For further information, call 800-819-1957.
